Technical Product Manager · Business Analyst · Product & Delivery

Technical Product Manager at Web3Task, where I run an AI voice notes app, the company landing page, and a few internal tools. Before this I was a Business Analyst at TechBridge, coordinating 9 engineers across two enterprise cybersecurity products. I write the specs and run the sprints, and on internal tools I also build the frontend.

EXPERIENCE

Technical Product Manager, Web3Task, Noida (Hybrid)

Sep 2026 - Present

- Own the **Voice to Notes** AI app. I took it over after launch, when it was live but crashing often, and have been making it more stable with each release.
- Own the **Web3Task landing page** end to end: copy, design direction, and working with the developers who build it.
- Write PRDs for internal tools (**HRMS, HR Buddy, and the daily scrum management system**) and build their frontends myself with AI coding tools.
- Look after part of the company's games department.
- Coordinate **9+ developers, designers, and stakeholders** across these projects, with work tracked in GitHub Projects.

Business Analyst, TechBridge Consultancy Services (CyberSIO), Gurugram

May 2026 - Aug 2026

- Cut FRS turnaround from a full working day to **under 2 hours** by rebuilding the process as a standard, AI-assisted workflow.
- Coordinated **9 engineers** across backend, systems, frontend, and QA to ship **10+ features** on two enterprise cybersecurity products.
- Delivered **5 releases**. The first slipped by two days; the next four shipped on schedule after I tightened handoff tracking between development, packaging, and testing.
- Managed **1,000+ Jira work items** and built reusable ticket templates that cut issue creation time by an estimated 3 to 5x.
- Wrote **20+ Functional Requirement Specifications** that engineering, systems, and QA used as the reference for scope.
- Sent **50+ end-of-day status reports** to the CEO and senior analyst covering progress, blockers, and upcoming risks.

Business Development Intern, EasyInsights (ad tech), Noida

Sep 2025 - Nov 2025

- Signed **2 clients out of 30+ outreach conversations** by qualifying prospects and following up on a weekly schedule.

SKILLS

Product and delivery: Product strategy and roadmaps, PRD writing, requirements gathering, business analysis, stakeholder management, risk tracking, release planning

Agile and tools: Agile / Scrum, Jira (epics, stories, tasks), GitHub Projects, sprint planning, Google Workspace, Microsoft Office

AI and building: Prompt engineering, AI-assisted frontend coding, Claude, ChatGPT, Gemini, NotebookLM

Domain: Cybersecurity basics: patch management and vulnerability assessment workflows, common threats and mitigations

EDUCATION

B.Tech, Computer Science and Engineering, Guru Gobind Singh Indraprastha University, Delhi

Nov 2022 - May 2026

Won the Inter-college Ideathon 2023 and made the top 10 at NSUT Hackathon 2024. Final-year capstone in cybersecurity with a team of four: I came up with the concept and owned design, documentation, and delivery.
